

# Big Wrench Repair News

Traditionally, the month of March has been “the guys month” and again this year we will feature our services to the guys. Writing about the rising gas prices has gotten a little boring, but it seems along with the change of the season, there is a change in the price of gasoline and diesel. Along with these price increases, the costs of goods and services also goes up. This alone makes vehicle maintenance very important. The goal of Big Wrench Repair is to keep your vehicle on the road for a long time at the lowest cost per mile. Last week I was reading consumer reports. There was an article that caught my eye. Here are a few lines from the article.

## **Drive your car to death, save \$31,000**

**By keeping your car for 15 years, or 225,000 miles of driving, you could save nearly \$31,000, according to Consumer Reports magazine. That's compared to the cost of buying an identical model every five years. Doing the correct maintenance to your car pays off big time.**

At Big Wrench Repair, all services and repairs are performed by Albin, with over 40 years of experience. Big Wrench Repair also has factory diagnostic tooling and information for all Ford, General Motors, Isuzu, Mazda, Saab, and Volkswagen vehicles. One way that we are able to keep the costs of repairs down, is by having the capability and the ability to test and come to a resolution of the problems quickly and efficiently without replacing parts that were not needed. Another way to keep your cost of operation down is to find a shop that you can trust, then let them take care of all of your vehicle maintenance. At Big Wrench Repair, we keep records of every maintenance or repair that is done to a vehicle. This makes it easy to be able to schedule the needed maintenance. Here in a few weeks, the income tax checks will be landing in mail boxes. Here is a great chance to make an investment that will pay great dividends to both your vehicle and the local economy. By spending the money on your vehicle, you will save money on gasoline, extend the life of your vehicle, make it safer, and by spending it locally, that money will get recycled through the local economy many times. What a great way to build the community. Give Alice or Albin a call and they will be glad to discuss the maintenance needs and requirements of your vehicles.
